Combating the Global Industry of Academic Ghostwriting: PlagScan is Represented As A Leader in Safeguarding Academic Integrity at Numerous Education Congresses

The software company from Cologne presents new and improved features of its software solution for plagiarism and ghostwriting detection.

(COLOGNE, Germany, August 2019) - **PlagScan, renowned safeguard of Academic Integrity across the world, welcomes the final spurt of the 2019 exhibition season. A total of eleven congresses, workshops and trade fairs on the subject of education are on the agenda throughout Europe. The focus will be on the software solution of the same name with which plagiarism and commissioned work written by ghostwriters can be reliably and efficiently identified. The company is committed to the same educational standards worldwide and strives to improve the quality of teaching. After successful participation at the 5th International Conference of the European Network for Academic Integrity, the Vienna Academic Days from 25 - 26 September are now on the agenda. Amongst other participants following the schedule include Learning management systems Canvas, Moodle, and the Frankfurt Book Fair. PlagScan was founded in 2009, and the software boasts a current user count of 1500 organizations worldwide.**

"We are looking forward to participating in this autumn's national and international education fairs and congresses. The schedules are very promising and our expertise in the field of plagiarism prevention and the recognition of academic ghostwriters is being sought-after now more than ever before," explains Markus Goldbach, CEO of PlagScan. "Safeguarding academic integrity is a complex task and is being jeopardized all over the world. Therefore the interdisciplinary exchange is essential and we are dedicated to doing our part in the best way possible."

The company's software solution efficiently checks to which extent the intellectual property of third parties has been infringed. PlagScan plugs the questioned document in its software and starts analysis according to billions of online sources, its own plagiarism prevention pool and documents. Depending on the length of the document, a plagiarism report is generated after only a few minutes highlighting possible red flags and insufficiently marked quotations in color. Sources are clearly listed and the proportion of text passages in other sources is displayed.

(More)

At the same time, it is able to recognize whether a document was authentically written by the person claiming to be the author.
